

Sustainable electric heating systems Escapade Silverstone, England

ThermoSphere
Collaborating with
developers, architects and
specialist consultancies
to design and deliver
sustainable electric
heating systems.

ThermoSphere

The race to reducing our carbon emissions is on and that means we need to change how we heat our homes.

We're a British-based manufacturer and have been designing electric heating systems since 1998. By combining our expertise in electric heating and drive for technological innovation, we deliver a range of smart, energy-efficient, and eco-friendly electric heating systems which help transform living spaces that are naturally better by design.

Fundamentally, we believe that comfort doesn't need to cost the Earth.

Leading the charge for electric heating

Case Study: Escapade Silverstone, England

Escapade Silverstone includes 60 individual residences, a clubhouse and car storage. It is completely integrated with the circuit, providing an authentic experience borne out of the world's foremost racetrack. Unique design and luxurious interiors, these residences benefit from leading technology, including electric room heating provided by ThermoSphere.

Developer: Escapade

Architect: Twelve Architects / Cube Design Limited

Main Contractor: HG Construction

Specialist Consultancy: Flatt Consulting / Liv-technology

Interior Design: Bell & Swift

ThermoSphere

were engaged early in the design and build specification process.

ThermoSphere were engaged by HG Mechanical & Electrical, the specialist division of the main contractor, who were looking for a second opinion on the infancy design spec' and supply for electric underfloor heating for installation across 60 individual residences.

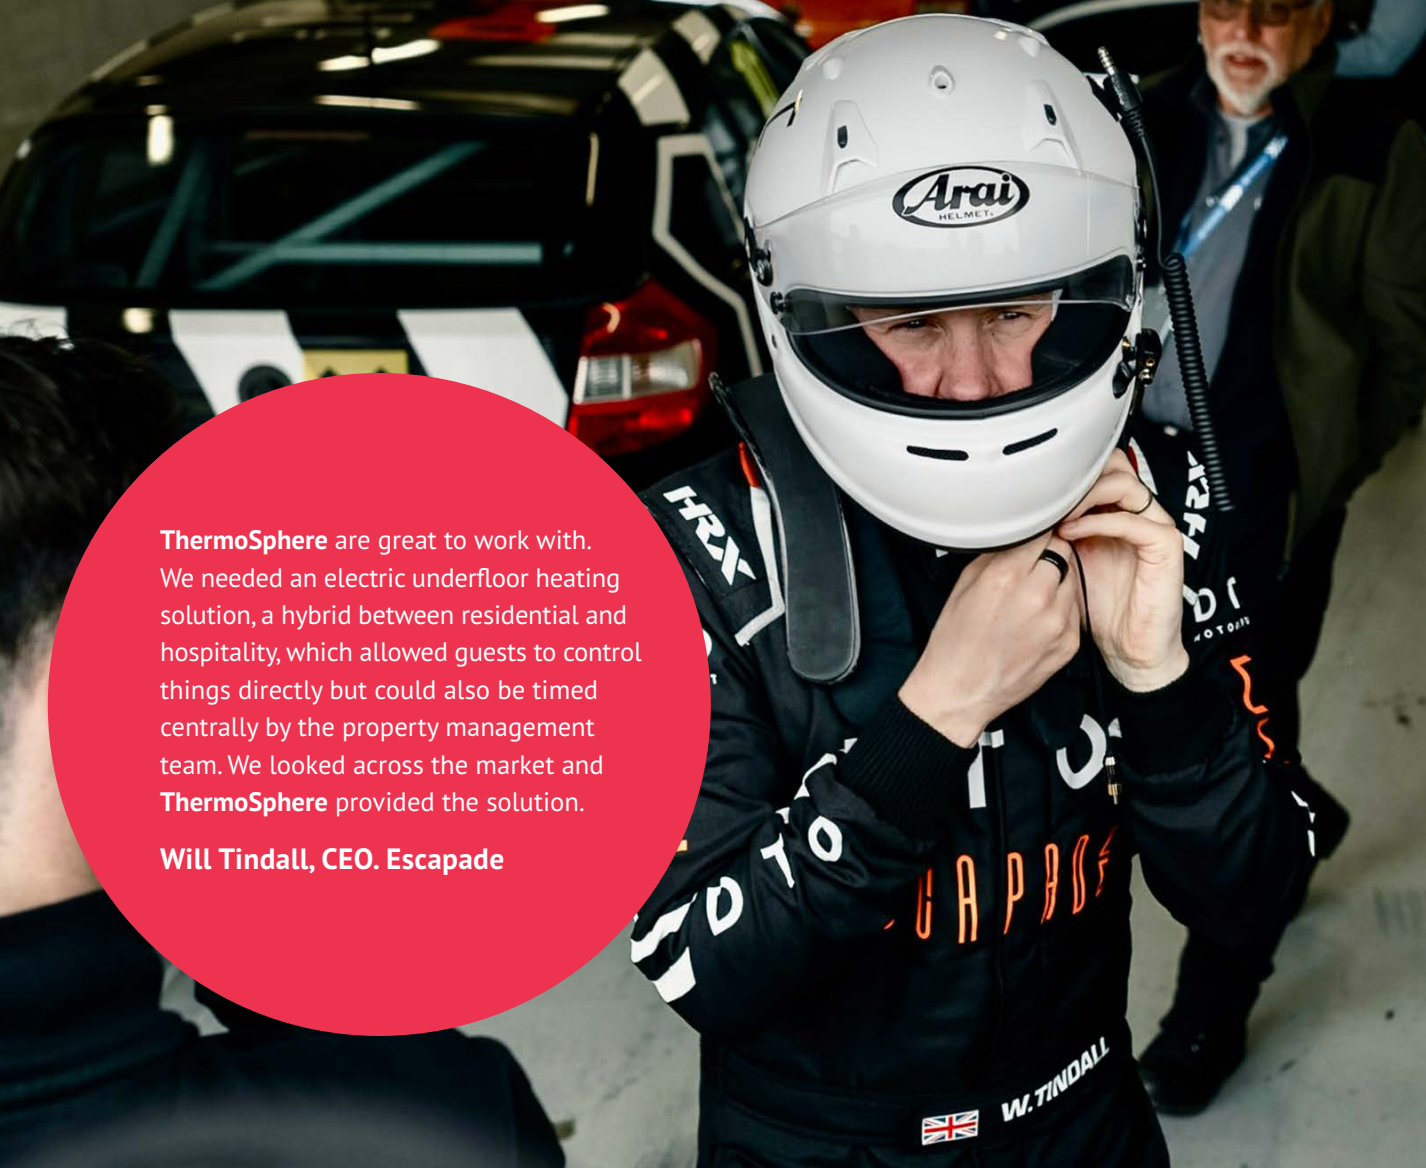

ThermoSphere
assigned a
Senior Project
Consultant.

Response to the brief was turned around quickly and a delivery schedule promised bespoke product supplied to site within 3 months from order.

Design changes required **ThermoSphere** to respond with revised proposal and a solution for central electric underfloor heating control across multiple units from a single source.

ThermoSphere are great to work with. We needed an electric underfloor heating solution, a hybrid between residential and hospitality, which allowed guests to control things directly but could also be timed centrally by the property management team. We looked across the market and **ThermoSphere** provided the solution.

Will Tindall, CEO. Escapade

ThermoSphere worked directly with the Owner and CEO, Will Tindall, to ensure the recommended solution solved control issues and delivered complete peace of mind.

Designs were tested and subsequently approved. **ThermoSphere** organised supply through Medlocks, the preferred electrical wholesale supply partner and a product call-off schedule was agreed.

ThermoSphere
are proud to
have played a part
in this prestigious
development.

ThermoSphere advised on electric underfloor heating installation and thermostat control, providing QA and product warranty.
