

thermo Sphere

Excellence in heating solutions.

Project

Fulham Wharf

Location

London

Project type

Residential

Product(s)

ThermoSphere Mesh
Manual Thermostats

Project overview

Fulham Wharf is a landmark regeneration scheme providing beautiful new homes and a large supermarket. It also includes restaurants, cafes and bars, a crèche, a gym, landscaped gardens, a riverside walk and an ecological area for riverside wildlife.

The client required a specific size of heating mat that was to be installed in the main bathrooms and ensuites. This would help give the homes that particular touch of luxury that they richly deserved. Wall heating adds extra warmth and comfort to a shower cubicle, it can also be used behind a towel rail to speed up drying time. Heated walls also help to prevent unsightly mildew and mould build up.

As we manufacture our own heating mats we were able to produce the specific size required for each mat. Our in-house manufacturing facility enables complete flexibility to match both the design criteria and specification. We produced the mats at a design output of 100W/m² which were controlled using our manual thermostats.
