

thermo Sphere

Excellence in heating solutions.

Project
Neo Bankside

Location
London

Project type
Residential

Product(s)
ThermoSphere Foil

Project overview

Neo Bankside is an iconic landmark on London's South Bank. However, this project had a challenge. How do you effectively heat an area where space is limited and radiators are not an option. We had the solution.

ThermoSphere Foil was used in each of the glazed wintergardens to reduce the risk of condensation. It was installed under the engineered timber flooring as wall space was limited which meant that radiators were not an option for the project.

Pre-made to suit the triangular shape of the wintergardens with extra-long floor sensors ensured that the installation phase was very straightforward and timed just before the final floor was fitted. This reduced any chance of damage.

The result was a beautiful space for residents which could be used all year round.
