

# thermo Sphere

**Project**  
Chatham Waters

**Location**  
Kent

**Project type**  
Residential

**Product(s)**  
Convector Panel Heater

## Project overview

This former under-utilised brownfield site sits on the mouth of the Medway Waterfront Peninsula in Kent. Part of the regeneration includes a stunning building of 199 luxury apartments and is less than 40 minutes away from Central London making this an extremely desirable location for commuters and investors alike.

A requirement for convector panel heaters was identified as the primary heat source for installation across the 199 luxury apartments. Introduced as a quality value engineering option, ThermoSphere's Lot 20 compliant convector panel heaters provided value without compromising heating efficiency and quality. Features include:

- Electronic thermostat with LCD display
- 7 day programmable heating schedule
- Open window detection
- Manual temperature setting
- Overheat protection
- Anti-frost protection
- Aluminium heat exchanger fins

In total, 566 convector panel heaters ranging from 500W to 2,000W were installed in this stunning project in the heart of Kent.
